The Impact on Oregonians of the Rise of Irregular Scheduling

Ellen Kaye Scott, University of Oregon

Mary King, Portland State University

Based on data collected through the 2016 Oregon Fair Work Week Survey, this paper reports on the prevalence and impact of the rise of irregular scheduling practices in Oregon.

Nearly 750 Oregonians responded to a structured survey on the breadth and prevalence of irregular scheduling practices on their job. Subsequently, 27 participated in longer followup interviews.
